ERIBA

ERIBA

Some vehicles illustrated are fitted with optional equipment which is subject to surcharge. Details relating to delivery, appearance, performance, measurements and weights are correct at the time of going to press, based on the British standards for sale and registration in United Kingdom. Some vehicles depicted may not be registrable in all European countries. Your Eriba dealer will gladly give you information about the standard models in your own country and the registration laws. Variations due to manufacturing tolerances are possible and allowed. Eriba reserves the right to make changes in design or technical improvements without prior notice. Copyright by HYMER.

Eriba – Going into the Third Millennium

Whilst maintaining the classical construction principles of the Eriba Touring caravan designed over 45 years ago – the strong steel frame, aerodynamic design, superb towing characteristics, light weight, the easy manoeuvrability, the low profile design that makes an Eriba Caravan so much more garageable – Eriba caravans are constantly kept up to date in design and in the technology of the ancillary equipment installed.

The Touring Standard is available in four layouts, all with smooth aluminium exterior and the classical frame furniture design in Italian Alder décor which offers so much storage space.

The Touring GT version, also with smooth aluminium sides, is the sportier version with state of the art curved furniture in pear wood décor, offered in twelve different layouts.

Eriba-Touring Standard

The Eriba Touring Standard range comprises three lengths of caravan, the Puck, Triton and Troll, the classical Eriba range that has been appreciated by so many delighted caravanners. The frames on the locker doors are made of solid wood, the furniture is kept in a warm tone of Italian Alder which combines beautifully for instance with the Caracas upholstery chosen for the two pictures on these pages.

Above: the rear dinette, convertible in a comfortable double bed, and, opposite, the small dinette forward in a Triton 430, a marvellous spot to have breakfast and also convertible to a single bed for a child or a guest.

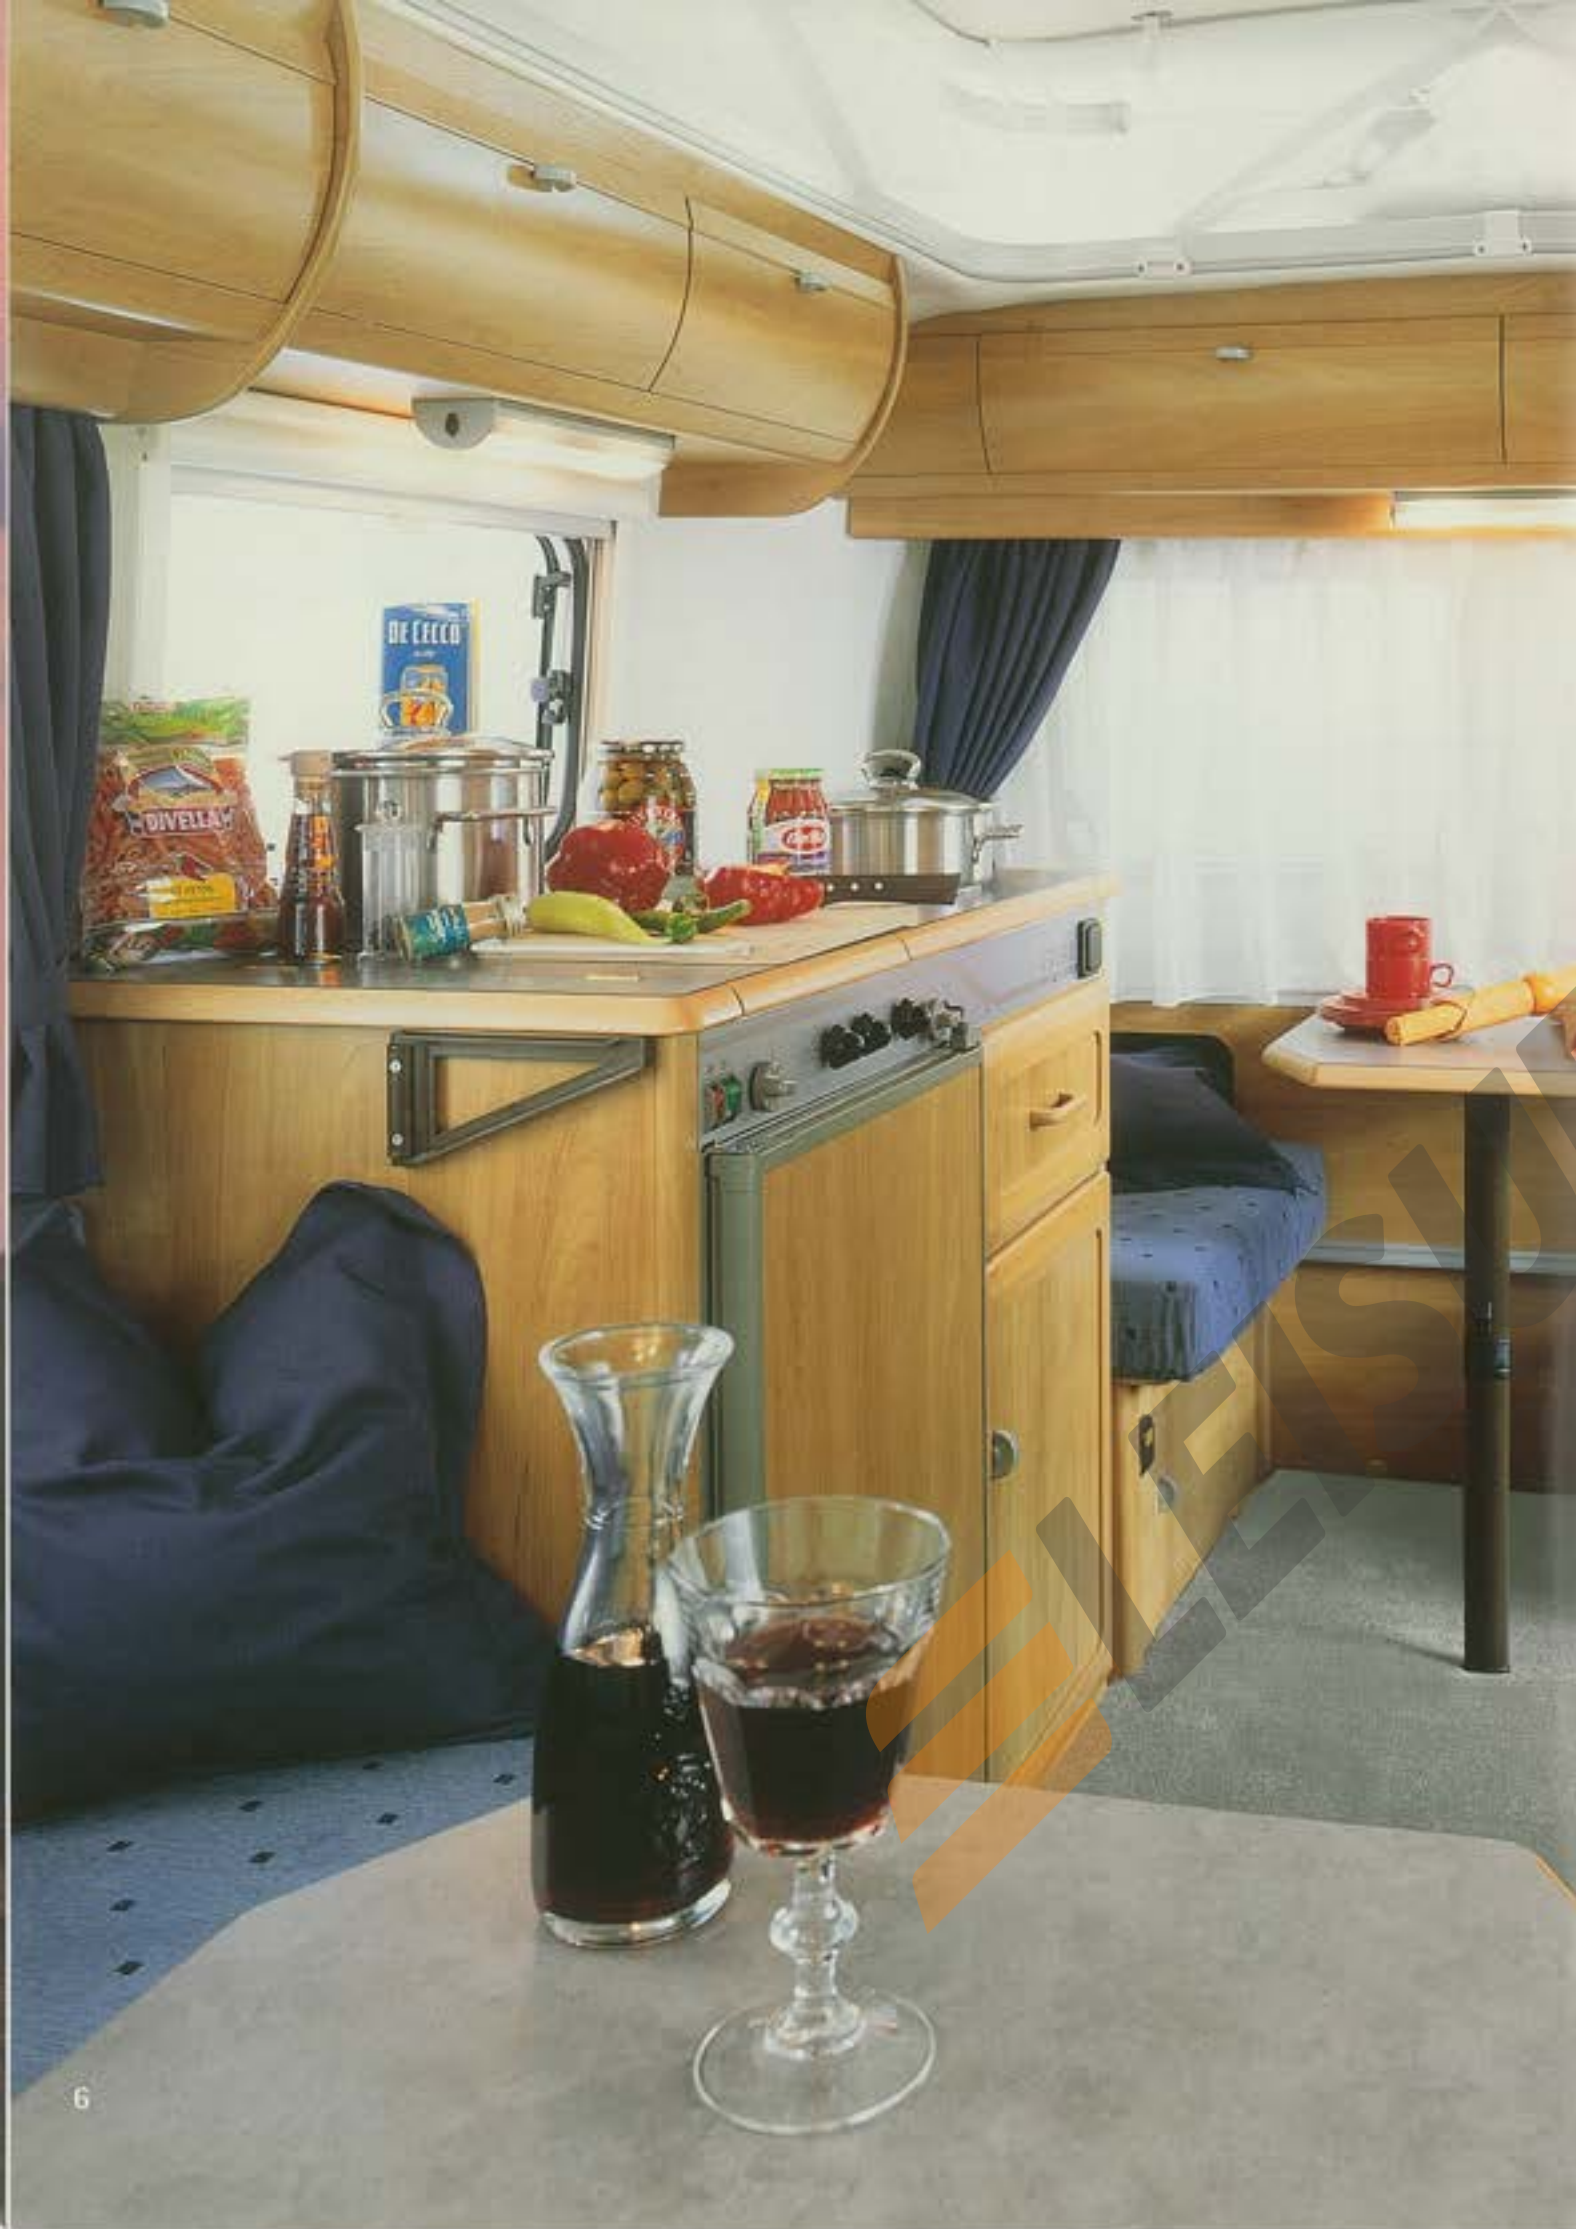

To the right, a shot of the washroom in a Triton 430.

On the left the L-shaped kitchen in a Puck which offers ample cooking space, a flush two flame hob and stainless steel sink. It also integrates the gas bottle locker which is flush on the outside. This picture was taken in the Puck GT, an identical layout with pear wood décor furniture.

Eriba-Touring GT

The sporty look of the Touring GT outside combines beautifully with the smart smooth curved furniture in pear wood décor inside. On the left a Troll GT 510 in Sydney upholstery, below a shot of Avignon upholstery in a Troll GT 540 towards the rear.

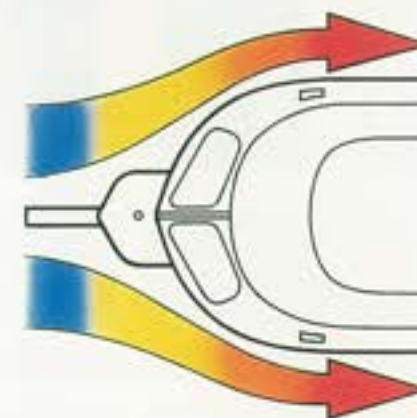

The Technology

The tubular steel frame structure making up the skeleton of an Eriba Touring caravan was developed over 45 years ago, and has not been superseded as a perfect element for making a strong, rigid, durable, lightweight caravan in superbly aerodynamic design.

The construction is insulated to ensure no cold spots to attract condensation on the inner panel, and is used to mount all the furniture inside the caravan, ensuring very long life. There are enough veteran Eribas on the road still to prove it!

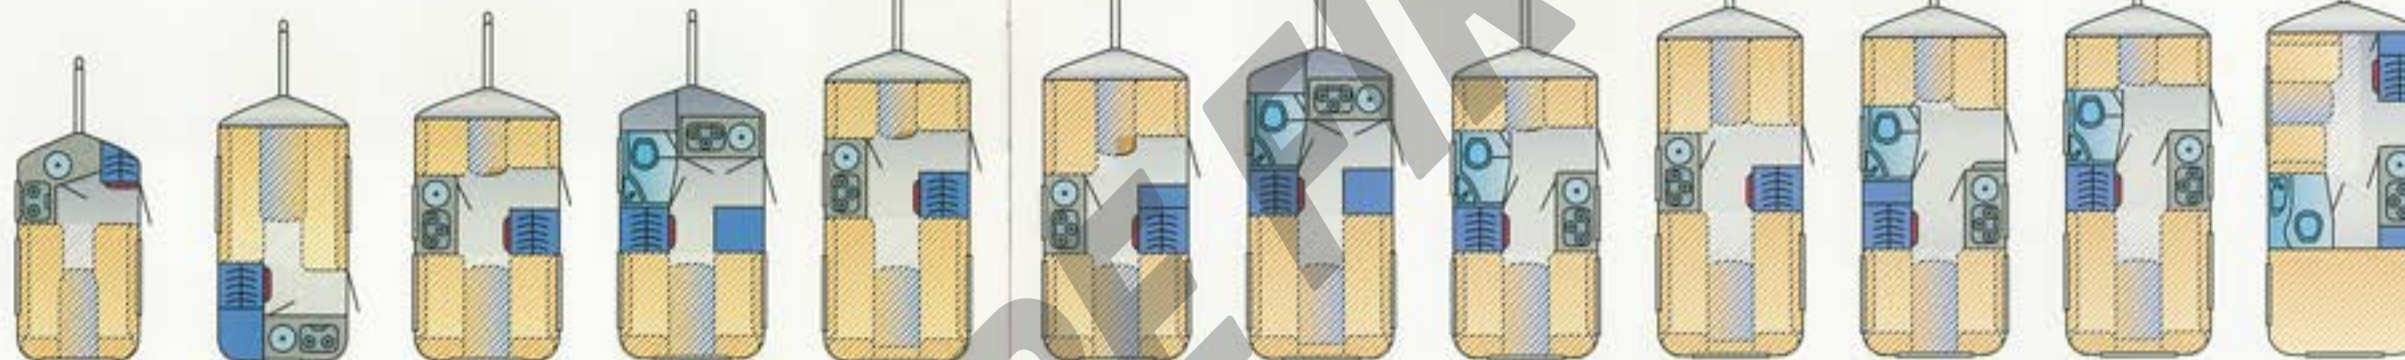

Eriba Touring caravans are narrower than most and with the roof down very low profile. These attributes, combined with low weight and low centre of gravity, make towing an Eriba an unrivalled joy for road holding and manoeuvrability. In fact, you might forget that you are towing a caravan at all!

Eriba's low narrow profile lets you take it under almost any low bridge, along almost any narrow winding road, drive it onto the car deck of many a ferry, keep it in many a garage, while saving fuel (compared with towing a larger traditional rigid caravan).
